Digital Closed Loop Single Axis Fibre Optic Gyroscope

Introduction

As an interference type digital closed-loop single-axis fiber optic gyroscope, AgileLight-400A has the advantages of low cost, large working bandwidth, high resolution, small zero drift, high linearity, short starting time, impact resistance and vibration resistance, it is an alternative to traditional mechanical gyros.

AgileLight-400A fiber optic gyroscope adopts IntelliProcess technology, which not only greatly eliminates the influence of temperature change on gyroscope performance, but also improves the key indicators of fiber optic gyroscope such as zero bias stability, angular random walk, scale factor linearity and stability. With low bias stability and angular random walk and strong vibration resistance, it is suitable for a variety of industrial applications. The high performance, rugged adaptability, compact construction and competitive price of the AgileLight-400A make it the recommended choice for motion sensing, platform stabilization, navigation and precision targeting.

Features

- All fiber optic technology: Long life, small size, high stability, anti-interference angle sensor.
- IntelliProcess Technology: Built-in high-performance digital signal processing chip for full digital operation and adaptive filtering technology makes the gyro's zero drift and angular velocity random walk 50%-75% lower than similar products.
- Integrated fiber polarization technology: reduces insertion loss, increases extinction ratio, and provides better resistance to temperature, mechanical shock and vibration for optical paths
- Compact and highly stable package: adapt to a variety of harsh environments. Widely applicable to all kinds of civil and military occasions
- QuickLaunch technology: Realize instant start-up, No external calibration required
- Optimal operating wavelength: sensitivity is increased by nearly 50% with the same structure, size and cost.
- Noise isolation and compression techniques: significantly reduce the angular velocity random walk
- SelfTrack technology: increase the dynamic range of the gyroscope

Mechanical Characteristic

● **Gyroscope polar >**

The polarity of X, Y, and Z gyros is defined by the right-hand helix rule, and the three axes are orthogonal. The thumb represents the direction of the sensitive axis, and the other fingers represent the direction of the angular velocity.

● **Working power supply >**

±5V power supply, power supply accuracy ±5%, power supply ripple is ≤ 20mV. +5V power supply requires 5W, and -5V power supply requires 1W. The steady-state power consumption at room temperature is ≤ 2.5W, and the full-temperature steady-state power consumption is ≤ 5W.
